

## CASE STUDY

# Vena Energy adopts a common global business model, harmonizes processes across all business units and regions

Vena Energy, a pioneering force in the Renewal Energy Industry, with a strong presence across 9 countries in the APAC region was looking for a solution to centralize its decision-making processes.

However, a major complexity arose from the company's complex setup of legacy databases, each catering to specific companies within the group. This made it exceedingly difficult to implement a cohesive Global Template and enable a global business model.

Some ISV solutions became unsupported, causing unreliable and potentially broken functionalities. Jet Reports' limitations further hindered access to crucial insights, compounding the company's challenges.

Diverse ISV solutions in each country's database caused data sync issues and inefficiencies. The lack of a standardized system hindered master data synchronization, resulting in inconsistencies and inaccuracies across the organization. Besides, the reliance on in-house infrastructure resulted in exorbitant maintenance costs.

### CLOUD SOLUTION

To address the given challenges, Alletec implemented D365 Business Central Online, shifting the entire infrastructure of Vena Energy to the cloud. This made it easier for Alletec to deploy a Global Template.

A unified Single Business Central tenant was created and the power of integrated processes was used. Leveraging Power Automate, Alletec built robust integrations on the cloud.

Additionally, the ISV solutions from the AppSource were incorporated to add invaluable functionalities to the system.

Power BI was implemented to encounter reporting issues and the decision-makers were empowered with a dedicated Mobile App.

### BENEFITS

Alletec played a pivotal role in transforming the business operations by shifting the entire infrastructure to the cloud, which helped deploy Global Template seamlessly. It also brought newfound flexibility and scalability to the processes, along with remote accessibility. The collaboration among users across all the subsidiaries became seamless, promoting a consistent approach throughout the organization.

Power Automate help build robust integrations on the cloud, ensuring reliable data synchronization and enhancing operational agility. Real-time, intelligent, and interactive reporting became a reality for the company with the implementation of Power BI, enabling data-driven decision-making from anywhere, at any time. Moreover, the Mobile App empowered the decision-makers to make informed choices on the go.

The user-friendly GUI made it easy for employees to navigate through and use the ERP effectively while requiring less user training. The solution paved the path for smoother workflows and optimized productivity.

*Business Central coupled with Azure Cloud services has been a game-changer for Vena Energy*
